

RISK ANALYTICS CASE STUDY

WHAT WE WILL SEE

PROBLEM STATEMENT

The loan providing companies find it hard to give loans to the people due to their insufficient or non-existent credit history. Because of that, some consumers use it to their advantage by becoming a defaulter.

When the company receives a loan application, the company has to decide for loan approval based on the applicant's profile. Two types of risks are associated with the bank's decision:

1. If the applicant is likely to repay the loan, then not approving the loan results in a loss of business to the company
2. If the applicant is not likely to repay the loan, i.e. he/she is likely to default, then approving the loan may lead to a financial loss for the company.

DATA OVERVIEW

This dataset has 3 files as explained below:

1. 'application_data.csv' contains all the information of the client at the time of application. The data is about whether a client has payment difficulties.
2. 'previous_application.csv' contains information about the client's previous loan data. It contains the data whether the previous application had been Approved, Cancelled, Refused or Unused offer.
3. 'columns_description.csv' is a data dictionary which describes the meaning of the variables.

EXPLORATORY DATA ANALYSIS

- Here, missing data percentage is very high.
- Maximum missing data percentage is 70%

EXPLORATORY DATA ANALYSIS

The heat map showing us that all of the Flag documents were not provided by maximum applicants. Hence we dropped all this columns.

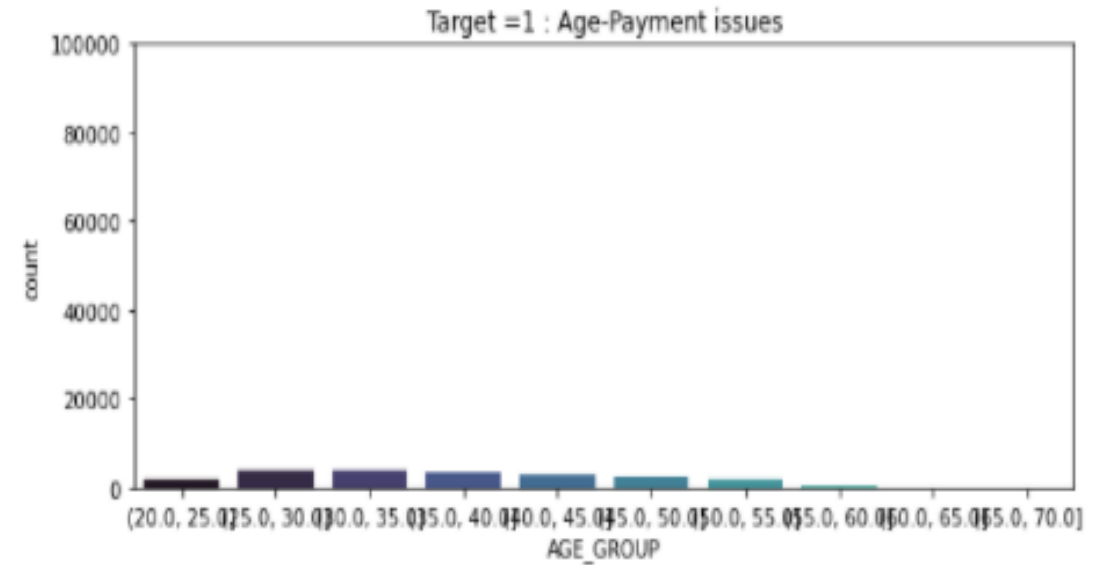

EXPLORATORY DATA ANALYSIS

Target variable: (1 - client with payment difficulties: he/she had late payment more than X days on at least one of the first Y installments of the loan in our sample, 0 - all other cases).

This data is highly imbalanced as number of defaulter is very less.

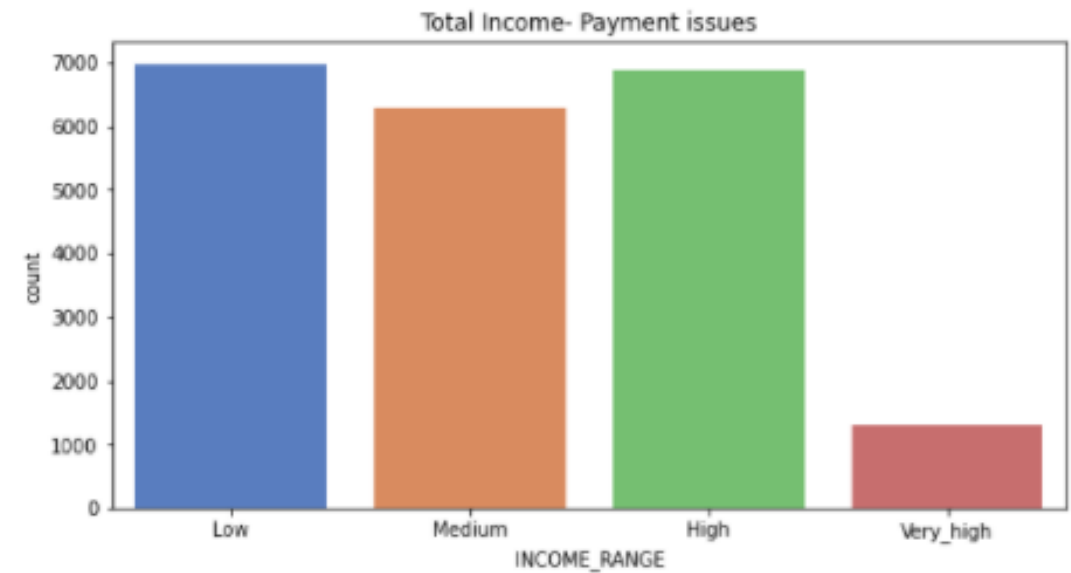

EXPLORATORY DATA ANALYSIS

Maximum customers belongs to age group 35-40 are able to make payment on time.

EXPLORATORY DATA ANALYSIS

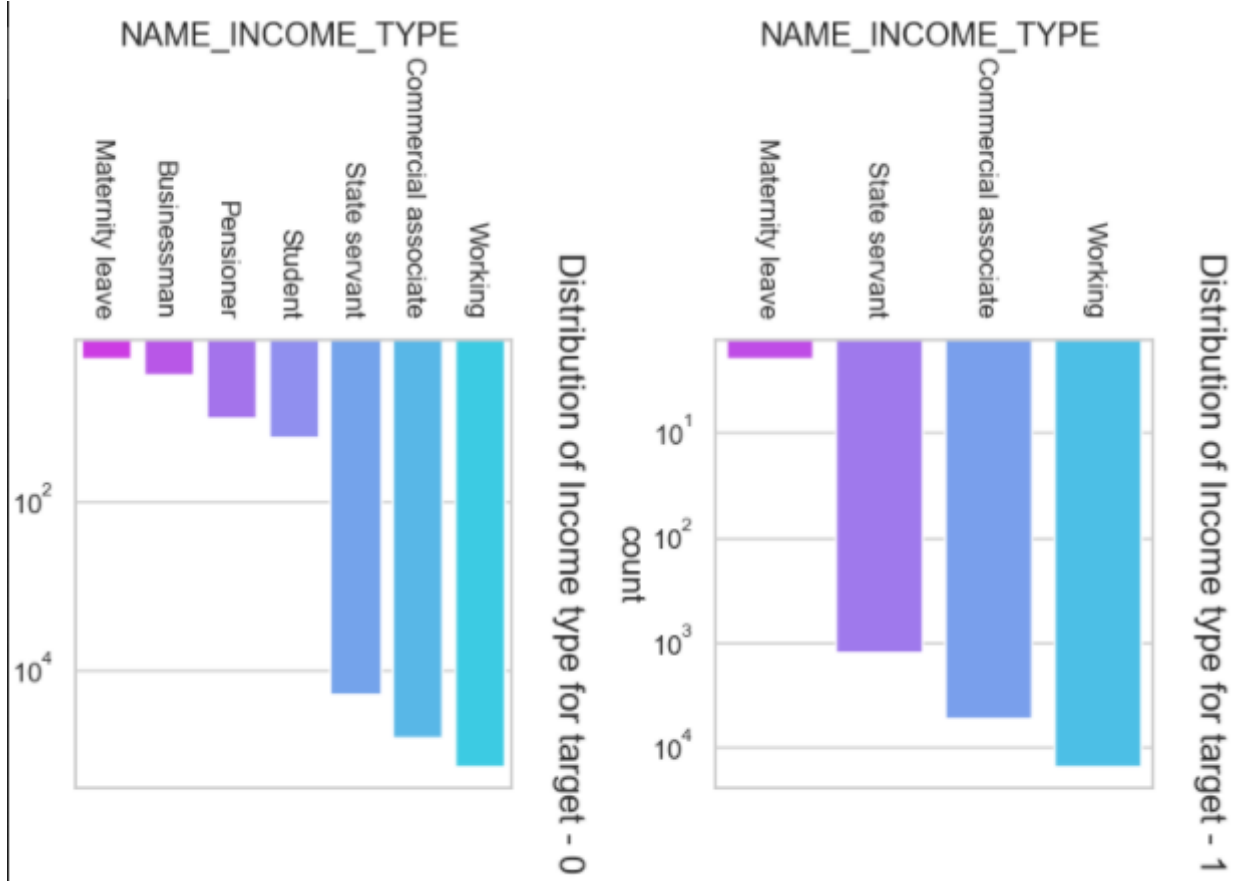

People from Low Income group have payment difficulty on time.

EXPLORATORY DATA ANALYSIS

Low Income with
Secondary Degree
people have payment
difficulty.

EXPLORATORY DATA ANALYSIS

People belong to WORKING class have maximum payment difficulties.

EXPLORATORY DATA ANALYSIS

Female customers pay loan amount on time and banks can target more female customers for lending loan.

Married customers have paid loan amount on time.

Customers owning House/apartment are most likely to make payments on time.

EXPLORATORY DATA ANALYSIS

Those who have paid the loan amount on/within time are more likely to get higher credits

EXPLORATORY DATA ANALYSIS

Most rejection of loans came from 'Repairs'.

Rejection rate is high for buying a car, building a house, & Buying a home

Loan given for Repairs purpose having more difficulty in payment on time.

EXPLORATORY DATA ANALYSIS

Prev Credit amount vs Housing type

Here for Housing type, office apartment is having higher credit of target 0 type customer and co-op apartment is having higher credit of target 1 type customer. So, we can conclude that bank should avoid giving loans to the housing type of co-op apartment as they are having difficulties in payment. Bank can focus mostly on housing type with parents or House\ apartment or municipal apartment for successful payments.

KEY POINTS & CONCLUSION

1. Maximum customers belongs to age group 35-40 are able to make payment on time.
2. Low Income range customers have more payment difficulties.
3. Revolving Loan percentage is less for Target - 1 customers.
4. Low income working people have payment difficulties.
5. Female customers pay loan amount on time and banks can target more female customers for lending loan.
6. Married customers have paid loan amount on time.
7. Customers owning House/apartment are most likely to make payments on time.
8. Married with academic degree having higher rate of default.
9. Giving loans to the housing type of co-op apartment is risky.
